Progressive Increases Ejector Pin Core Hardness, Expands Offering for Ejector Pins, Core Pins, Blades

Expanding Industry Standards for Ejector Pins, Core Pins and Blade Ejectors

Wauconda, IL – Progressive Components recently increased their Ejector Pin core hardness to 48-50Rc., and expanded their product line with sixty sizes added for their Inch, DIN, and JIS standard pins.

In addition, Progressive also expanded their line of precision ground and through-hardened Core Pins to include 32 new, larger diameter and longer length products.

Lastly, to round out the Ejector Pins, Core Pin, Sleeve section of the Progressive catalog, they also added a full line of Inch Blade Ejectors which adhere to and expand industry standards. Sizes begin at .015" blade thickness, all the way to .625", manufactured from wear resistant O-1, hardened throughout to eliminate chipping and allow flexing, and are easy to machine/grind.
