CamActions: Core Pulls Made Simple

Progressive's off-the-shelf CamActions reliably pull core pins or undercut details.

Suited for more than just simple details, CamActions can also accommodate angled pulls, and all with standard items to help ease the design, build and maintenance processes.

2-D and verified, machinable 3-D CAD geometry is online for these compact modular units:

- CamAction 100 Series – Eliminates angle pins, as well as eliminating machining to the cavity half of the tool. Travel = .160" / 4mm.
- CamAction 200 Series – Positively pulls mold details, with mechanical actuation occurring from the stationary half. Travel = .230" / 6mm.
- CamAction 300 Series – Designed for releasing larger details. Travel = .250" / 6mm.
- CamAction 400 Series – Releases larger details with deep undercuts, and provides a cooling circuit. Travel = 1.00" / 25mm.

Find out how you can simplify your tooling projects by using Progressive's CamActions. Access our online catalog at www.procomps.com.

About Progressive Components

Progressive Components, headquartered near Chicago, Illinois, develops and distributes components for the production tooling industry. Off-the-shelf standards designed to speed mold building and reduce costs and downtime are provided throughout a network of locations including regional hubs in England and Singapore. In addition to direct locations, channel partner representation ranges from India to South Africa, from Italy to Taiwan, and all points in between. Visit www.procomps.com for more information.
