Time Saving Standards for 3-Plate Molds

Wauconda, IL, U.S.A. – Progressive Components recently introduced its Puller Pins and Bushings, new additions to the company's extensive offering of time-saving standards.

Puller Pins and Bushings are ideal for 3-plate molds to hold the sprue gate in place, allowing proper operation of the sprue and runner removal process. Additional benefits include:

- Puller Pin undercuts are heat treated after machining for added durability
- Bushings are sized for standard plate thicknesses, eliminating custom manufacturing and fitting
- Bushings allow for quick and secure installation, and feature a tapered lead-in for smooth long-term performance
- Customs are also available at competitive pricing and delivery.

With worldwide distribution, Progressive Components leads with innovation and new standards that help speed mold building and reduce mold downtime.

For more information, call 800-269-6653 (outside the U.S. call 1-847-487-1000) or visit Progressive Components online at www.procomps.com.
