Now Available from Progressive Components: VersaLifter Adds New Options for Designers

Wauconda, IL -- Progressive Components, a leading supplier of components for the production tooling industry, has added the VersaLifter® to its popular range of undercut release solutions.

Originally developed by Omni Mold Systems of Lisbon, CT, Progressive now owns the product rights and serves as the primary global distribution source for this product.

“Mold designers like options,” states Al Hickok, Progressive’s Midwest technical sales engineer. “Whether the choice is based on unique limitations in the mold, toolroom familiarity, or customer preference, offering a range of approaches is appreciated by all.”

The VersaLifter features support guides that provide smooth sliding action, reducing galling & flexing problems. Its compact design allows for tighter ejector pin placement.

This product is in good company with Progressive’s popular UniLifter system, which is a widely used standard, and FlexiCore undercut release component that offers space savings and economy.

Available in a wide range of sizes, the VersaLifter is manufactured in A-10 steel, which is finish machined and ready for molding detail.

With accessories including support guides, more information can be obtained by calling 800-269-6653.

Progressive Components is a leading supplier of components for the production tooling industry. Based in Wauconda, Illinois, Progressive celebrates 18 years in business this year and continues to design and develop industry-leading standards that speed mold building and reduce costs and downtime.
